Unit 4. Section 1. Learning Objective 3.

4. What is protected access?

Members marked as protected are accessible within the same class, subclasses (classes that inherit from the parent class), and within the same package.

Unit 5. Section 3. Learning Objective 4.

2. For what is the finally statement used?

The finally statement is often used for tasks like closing resources (files, database connections, network sockets), releasing acquired locks, or performing cleanup operations that are necessary no matter what happens within the try block.
